Personal Statement

I have always enjoyed abstract thinking and problem solving, which is what first prompted me to learn computer programming. During my university degree, I chose to incorporate code into my coursework wherever possible: from exploring algorithmic music using SuperCollider, to empirical research using Python and R. I received great personal satisfaction from these projects, which has prompted me to develop my professional skillset as a software engineer.

Technical Skills

Overview: C#, .NET Framework, Python, Input/Output streams, Async C#, LINQ, Unit Testing using NUnit, Mocking using Moq, Microsoft Visual Studio, PowerShell, Git

Databases: Relational Databases (Microsoft SQL Server, Transact SQL, SQLite), Basic ADO.NET, Object-relational mapping (ORM) using Entity Framework, Data Normalisation and Schema Design

Back End: ASP.NET, SignalR, Model-View-Controller (MVC), Authentication in ASP.NET Core, Middleware in ASP.NET Core, Containerisation using Docker

Front End: HTML, CSS, Tailwind, DOM, Blazor, JavaScript, React, Astro

Cloud: AWS, Netlify

General: Object Oriented Programming, Design Patterns, Functional Programming, Test Driven Development, Pair Programming, System Architecture

Projects

.NET TV Show Review and Social Network Site (Team Project) | [GitHub](#)

- Worked with ASP.NET Core and Blazor to create a responsive web application.
- Implemented authentication using Identity and a live-chat room feature using SignalR.

.NET RESTful Record Shop API | [GitHub](#)

- Worked with ASP.NET Core, SQL Server, and Entity Framework Core.
- Followed test-driven development, using NUnit for unit testing.

JavaScript AI Recipe Generator | [Live Demo](#) | [GitHub](#)

- Worked with Vite, React, and the Huggingface Inference API.
- Deployed the project to Netlify and setup Serverless Functions.

Personal Portfolio Website | [Live Demo](#) | [GitHub](#)

- Worked with the component-based framework Astro along with Tailwind CSS to create a responsive, data-driven website.

Professional Development

Northcoders Software Development in C# Bootcamp

November 2024 – February 2025

- An intensive program teaching the skills needed for software development within the C#.Net ecosystem. It is heavily built around pair programming and industry best practice.

The Odin Project: Foundation Course

September 2024 – October 2024

- An open, self-taught curriculum teaching the fundamentals of web development using HTML, CSS, and JavaScript.

Python Programming MOOC 2024

July 2024 – October 2024

- An open, self-taught curriculum developed by the University of Helsinki, covering multi-paradigm programming using the Python language.

Education

BA Music | First-Class Honours | Durham University

Focus: Algorithmic Composition and Empirical Studies

September 2021 – June 2024

Prizes and Distinctions:

- *The Rosalind Dickinson Prize*, awarded to “an outstanding candidate”
- *The Eve Myra Kisch Prize*, awarded for “proficiency in Music”

A-levels: Maths (A) Physics (A*) Music (A*)

September 2018 – June 2020

Experience

Librarian, Durham University Palatinate Orchestra(s)

June 2023 – June 2024

- Managed the organization and acquisition of sheet music for two classical orchestras totalling over one hundred musicians.
- Worked as a part of a team to organize concerts, rehearsals, and logistics.

Musical Director, Josephine Butler College Folk Band

June 2022 – June 2023

- Directed and arranged music to be performed by a small band,
- Liaised with event managers to organize required equipment and technology.

Hobbies and Interests

Outside of programming, I enjoy playing the clarinet and piano in orchestras, and composing music of my own. I also enjoy physical exercise and have a great interest in spending time outdoors.
